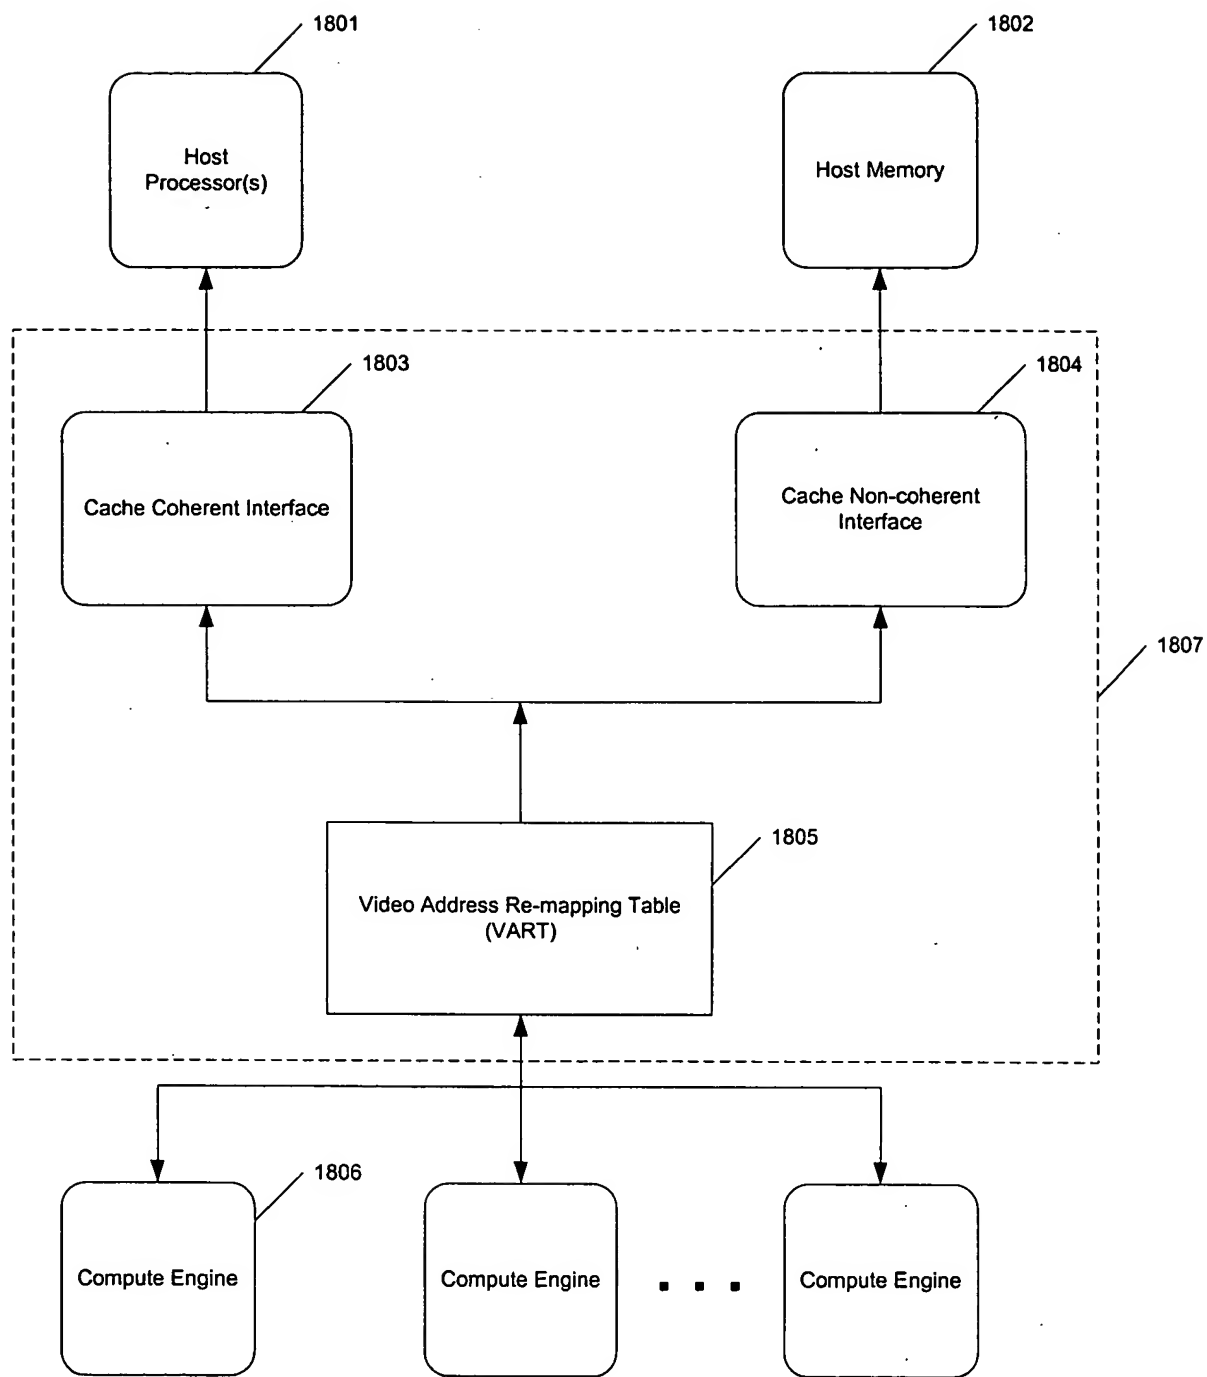

Figure 8

The diagram illustrates the structure of three fields: 1901, 1906, and 1907.

Field 1901: Even/Odd Page (32 bits)

Even Page																Odd Page																							
Physical Page Number (PPN)																---		C	V	Physical Page Number (PPN)																---		C	V
0	19	20	29	30	31	32	41	51	52	61	62	63	72	81	91	101	111	121	131	141	151	161	171	181	191	201	211	221	231	241	251	261	271	281	291	301	311	321	

Field 1901 is divided into two 16-bit sections: Even Page (bits 0-31) and Odd Page (bits 32-63). Each 16-bit section is further divided into a 14-bit Physical Page Number (PPN) field, a 2-bit field (---), and two 1-bit fields (C and V).

Field 1906: Base Address (32 bits)

Base Address																			---												
0	19	20	31																												

Field 1906 is a 32-bit field divided into a 19-bit Base Address field (bits 0-19) and a 13-bit field (bits 20-31, labeled ---).

Field 1907: Size (32 bits)

---													Size																		
0	12	13	31																												

Field 1907 is a 32-bit field divided into a 13-bit field (bits 0-12, labeled ---) and a 19-bit Size field (bits 13-31).

Pst	Name	Description
00	Idle	CQ counters are equal and no current command executing. Program counter is invalid.
01	Run	Command was executing. Program counter points to next instruction that would have been executed.
10	IWait	Command was executing, but instruction fetching has stopped due to a previous exception. Program counter points to the next instruction that would have been executed.
11	CWait	Command was not executing due to an exception in fetching the command. Program counter is invalid.

Name	Descriptions
IE	Illegal Opcode Exception. Occurs whenever an illegal Opcode is fetched for execution. Cleared when read by the host.
PE	Program Counter Exception. Occurs whenever the host does a read program counter with exception. Cleared with read by host.
ME	Memory Access Exception. Occurs whenever a memory operation results in a memory access exception. Cleared when read by the host.
ICODE	Interrupt Code. Can be read and written by a compute engine or the host.
IV	Interrupt Valid. Set and read by the compute engine to indicate and interrupt to the host. Read and cleared by the host.
